

Climatic disturbances

They cause imbalances in all living beings!

Difficulties? "How do we get as many people as possible involved in things that don't disrupt their daily lives, since our fellow citizens are more concerned about the complexity of our world, which has become violent, meaningless, blind, with needs that are not being met in the present, because they may be: ... in a job or with a pension that can't pay their bills ... or suffering in a job that doesn't suit them ... or misunderstood and on the margins of society ... or out of work ...".

"Receiving and giving is the meaning of the Oui Ensemble social innovation action organized in unison in FRANCE and LAOS".

In the wake of the health crisis - "Going through a major plan to transform our society and our economy" is the aim pursued by the experts at [France Strategy](#), who have selected us in their 2020 call for projects, in 2 of their 7 areas for reflection:

- "What path for a sustainable economy?"
- What forms of interdependence and autonomy at different scales?

We have positioned ourselves on the theme of "Metro, work, robot: what kind of working environment do we want?", with a proposal that is complete and ready to be tried out after looking at human needs at each stage of life.

Who are we?

Ordinary citizens, conceptual entrepreneurial resources from all backgrounds, above all realists and pragmatists, with no unfounded fears!

We know that a future can only be possible on the condition of a new ethic, which must materialize in the securing of human resources to combat the slide towards financial, physical, emotional and psychological dependence: → By taming the feeling of dignity. → By taking individual interests into account. → By supporting sustainable development projects.

« LIFE IN ACTION »

The global phenomenon of disruption in all areas invites us to re-direct the Human and Social Sciences towards another defined foundation.

The Wish Ensemble ?

To branch off towards another model of success for the future of our children...

Project background: "Together, we can create a better future for everyone."

Purpose of this general interest project:

We are carrying out a humanistic, apolitical citizen action with a **social** and **environmental** impact.

Value proposition? To meet the needs of a community of citizens with common interests, by reorganizing activity maintenance and changing lifestyles, without sacrificing generations, and by federating "Aging Well Together for a Long Time" with its 3 principles.

Contribution? Creation of a new, meaningful profession orchestrated on a self-financing basis: "Social Entrepreneur Mediator Link Worker" in multifaceted, synergistic cooperation with citizens, public and private partners of all social statuses.

Architecture of value? In unison between FRANCE and LAOS, Oui Ensemble uses the holistic project design process to respond to its value proposition and implement action with:
→ 7 Activity Poles backed by a SîRH. → The new profession, articulated between Three Professional Profiles and Five interactive and interdependent Key Competencies to steer the networked humanist cause in a unique win-win Multi- Services HR approach.

An Organization with Principles:

→ Inclusion

This project promotes inclusion and diversity for a fairer world.

→ Solidarity

The project emphasizes solidarity and mutual aid for a better future.

→ Progress

The project aims to build a better future for all based on social and economic progress.

Working differently **Living with dignity**

Aging with peace of mind

→ The volume of problems and the lack of funding to solve them has motivated us to set up a different form of cooperation, both locally, nationally, and internationally.

➤ The "HR recipe" is based on a bottom-up strategy, which means that ideas and initiatives come from the bottom. It includes:

- The holistic global and transversal project design process, enabling a preventive and flexible approach.
- The operational marketing approach focused on "People" at every stage of life. "Keeping people active" is rethought from the end of life, to reconcile "social inclusion", "quality of life at work," and "environment."

Working in unison to serve living beings!

→ Operational "Socials Entrepreneurs Mediating Link Workers" multi-faceted innovators supported by a fair circular economy.

- **Missions:** Promoting the cause, raising awareness, educating, initiating and undertaking sustainable development projects.
- **Requirements:** Respecting ethics, collaborating in multi-disciplinary teams, offering personalized services.

→ In synergistic cooperation with Human Resources, active, committed citizens, trained and valued.

- **Missions:** Remain autonomous and active, have jobs and missions that are valued, receive training, work close to home.
- **Requirements:** Delay dependency, avoid illegal channels, earn a decent income, stay connected without isolation.

→ In synergistic cooperation with the Companies and Individuals beneficiaries of multi-Services RH by meeting their individual needs.

- **Missions:** Collaborate in the solidarity network, receive ethical, high-quality services.
- **Requirements:** Simplicity of service management, building relationships based on trust, being able to finance the services received.
